

Press Release

Dolphin Aquasonic Swimming Pool Alarm

Just what everyone was waiting for, a portable alarm system making use of sonic technology! The Dolphin Aquasonic is at the forefront of technology, removing the possibility of triggering neighbouring alarms by using water as the transmission medium.

Whether going on holiday, visiting friends or family you can take the Dolphin Aquasonic with you. The unit weighs less than 1.2kg and is fully transportable. Upon arrival at your venue simply drop the transceiver in the body of water, strap on a transmitter band and instantly have protection and greater piece of mind.

There is no limit to the number of transmitter bands you can use with one transceiver. There is no need to worry about matching the transmitter bands with the transceiver as is the case with competitor products.

The Dolphin Aquasonic includes an out of water alarm which will sound immediately should the unit be removed from the water without permission.

The Dolphin Aquasonic is designed to operate in chemical as well as salt water pools and is just as effective in any garden pond.

The Dolphin Aquasonic system uses industry standard batteries that are fitted and replaced as easily as a torch battery. An audible alarm will sound to alert you when batteries are running low.

To find out more about the Dolphin Aquasonic Swimming Pool Alarm, contact Dolphin Alarms Ltd on +44 (0)1235 810175 visit our website on www.dolphinalarms.com or send an email to info@dolphinalarms.co.uk
